

X-CHANGE

The PolyGard®2 Exchange Sensor

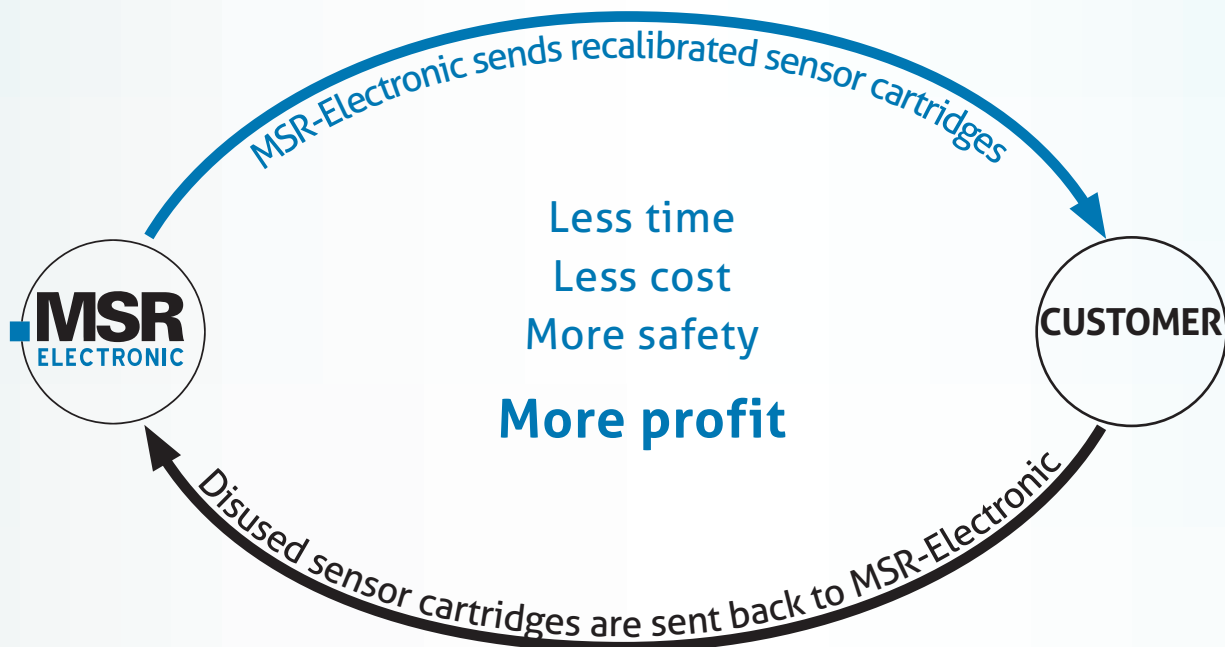

THE NEW CALIBRATION FOR GAS WARNING SYSTEMS

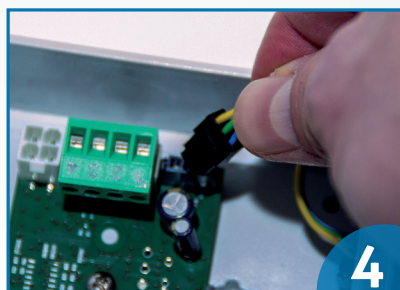

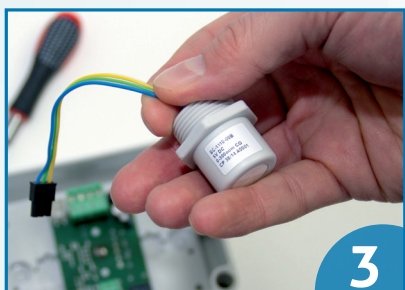

- Easy exchange
- No specialized company needed
- Available for every gas type
- At guaranteed exchange prices
- No functional test (SIL2 software)

**change
now!**

Simply replaceable in a few minutes

Open the housing with a screwdriver (1).

Disconnect the sensor cable and unscrew the sensor head (2).

Exchange the sensor cartridge (3) and connect the cable of the new sensor head to the PCB (4).

Close cover of the housing with the screws (1).
The recalibrated sensor is ready for use at once.

Real price advantage

The necessary calibration of the sensors has been a complicated procedure so far:

- dependency on an external certified company
- high expenditure of time and money

The X-CHANGE exchangeable sensor turns the recalibration into a home game:

- delivery of recalibrated sensor cartridges
- easy and independent exchange
- significant time and cost savings

The MSR-Electronic X-Change support guarantees a price based on the consumption of the sensor capacitance. For each uncalibrated sensor returned to MSR-Electronic, you will receive a credit for the unused capacity of the sensor.
